

# METALLIC BONDING – DIAGRAM B

## Interpretation & Practice

Metallic bonding is the strong electrostatic attraction between **positive metal ions** and **delocalised electrons**.

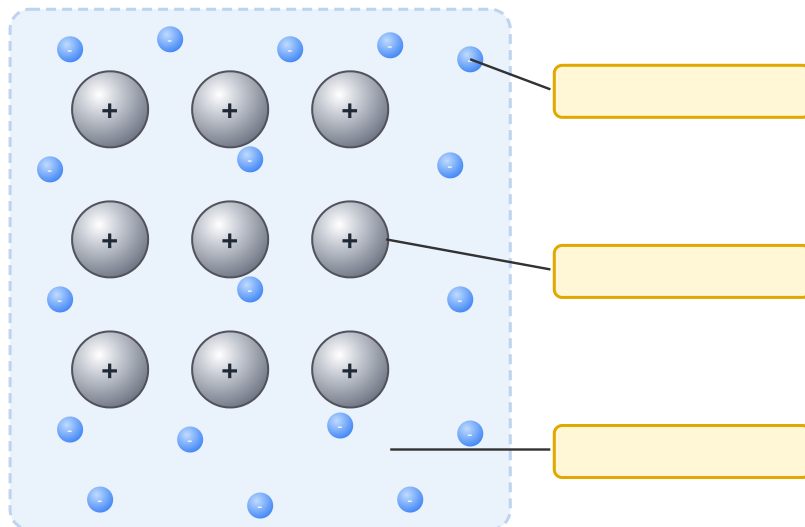

### 1 LABEL THE STRUCTURE

Label the diagram using the terms in the box below.

delocalised electrons

positive metal ions

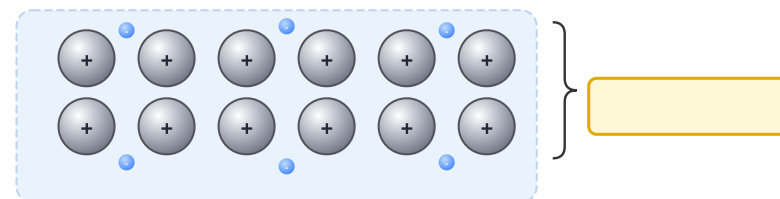

layers can slide

### 2 MALLEABILITY

The diagram shows layers of metal ions. When a force is applied, the layers can slide over each other.

Explain why the layers of ions can slide over each other.

**BEFORE FORCE****FORCE APPLIED****AFTER FORCE**
