

USING RESOURCES – FINITE & RENEWABLE RESOURCES

KEY VOCABULARY

Finite resource: one that will run out, e.g. crude oil, metal ores.

Renewable resource: one that is replaced as fast as it is used.

Natural resource: a material from the Earth, sea or air.

Sustainable: meets our needs without harming the future.

COMMON MISCONCEPTIONS

~~All natural resources are renewable.~~

✓ Many (oil, ores) are finite and will run out.

~~Synthetic always means worse.~~

✓ Man-made materials can outperform natural ones.

~~Sustainable development means stopping use.~~

✓ It means using resources wisely for the future.

FINITE VS RENEWABLE

Finite: crude oil, coal, metal ores.

Renewable: wood, cotton, ethanol from crops.

Chemistry improves processes and products.

Sustainable development = balance need and future.

Reduce, reuse and recycle to conserve resources.

1 DEFINE FINITE

State what is meant by a **finite resource**. [1 mark]

2 CLASSIFY

Classify each as finite or renewable: crude oil, wood, copper ore. [3 marks]

3 SUSTAINABILITY

Explain what is meant by sustainable development. [2 marks]

4 ROLE OF CHEMISTRY

Suggest how chemistry helps make resources last longer. [2 marks]

5 FILL THE GAPS

Complete the sentence using the word bank. [2 marks]

A ____ resource will ____, while a renewable one is replaced.

finite

renewable

run out

replaced

6 EVALUATE

Suggest one benefit and one drawback of using a renewable resource. [2 marks]
