

ATMOSPHERE – GREENHOUSE GASES & CLIMATE CHANGE

KEY VOCABULARY

Greenhouse gas: absorbs heat (IR) — e.g. CO₂, methane, water vapour.

Greenhouse effect: trapped heat keeps the Earth warm.

Climate change: long-term change linked to rising greenhouse gases.

Carbon footprint: the total greenhouse gas a product/activity makes.

COMMON MISCONCEPTIONS

~~—The greenhouse effect is always bad.~~

✓ Some warming is essential for life on Earth.

~~—The ozone hole causes global warming.~~

✓ They are separate issues — warming is from greenhouse gases.

~~—Weather and climate are the same.~~

✓ Climate is the long-term average of weather.

THE GREENHOUSE EFFECT

1 NAME GASES

Name **two** greenhouse gases. [2 marks]

2 HOW IT WORKS

Explain how greenhouse gases keep the Earth warm. [3 marks]

3 HUMAN CAUSES

Give two human activities that increase carbon dioxide. [2 marks]

4 EFFECTS

Describe one effect of climate change. [1 mark]

5 FILL THE GAPS

Complete the sentence using the word bank. [2 marks]

Greenhouse gases _____ radiation and re-emit it, warming the Earth.

absorb

infrared

reflect

ultraviolet

6 REDUCE FOOTPRINT

Suggest one way a person could reduce their carbon footprint. [1 mark]
